CHEMISTRY AND PHYSICS OF LIPIDS

Subject index

Volume 93 (1998)

Active site architecture; Lipase; Enantioselectivity; Stereospecificity; Crystal structure; X-ray crystallography **93**, 115

Acyl donors; Resolution; C-3 chirons; CALB; Substrate effect; Solvent effect; Water activity **93**, 199

Biocatalysis; Lipase; Organic solvent; Supercritical fluids **93**, 157

Biochemical properties; *Staphylococcus*; (Phospho)lipase; Substrate selectivity; Structure-function relationship **93**, 27

Brefeldin A; Lipoprotein lipase; Hepatic lipase; Combined lipase deficiency; Dimerization; Endoplasmic reticulum **93**, 149

CALB; Resolution; C-3 chirons; Substrate effect; Solvent effect; Acyl donors; Water activity **93**, 199

Candida antarctica; Lipase; Protein engineering; Stability; Enantioselectivity **93**, 95

Candida; Lipase; Isoenzymes; Genetic code **93**, 47

Candida rugosa; Lipase; Isoenzymes; Expression; Secretion **93**, 143

Candida rugosa; Lipase production; On-line monitoring and estimation control strategies; Purification; Fermentation **93**, 131

C-3 chirons; Resolution; CALB; Substrate effect; Solvent effect; Acyl donors; Water activity **93**, 199

Chain length specificity; Modeling; Structure; Mutant; Esterase; Protein engineering **93**, 67

Chiral compounds; *Rhizomucor miehei*; Lipase; Resolution **93**, 169

Chiral recognition; Structure-function relationships; Interfacial activation; Protein engineering; Molecular modeling; Enantioselectivity **93**, 57

Combined lipase deficiency; Lipoprotein lipase; Hepatic lipase; Dimerization; Endoplasmic reticulum; Brefeldin A **93**, 149

Crystal structure; Lipase; Enantioselectivity; Stereospecificity; Active site architecture; X-ray crystallography **93**, 115

C-terminal; Phospholipase activity; *Staphylococcus hyicus* **93**, 39

Dimerization; Lipoprotein lipase; Hepatic lipase; Combined lipase deficiency; Endoplasmic reticulum; Brefeldin A **93**, 149

Enantioselectivity; *Candida antarctica*; Lipase; Protein engineering; Stability **93**, 95

Enantioselectivity; Lipases; Enthalpy–entropy compensation; Organic media; Two-state models **93**, 81

Enantioselectivity; Lipase; Stereospecificity; Crystal structure; Active site architecture; X-ray crystallography **93**, 115

Enantioselectivity; *Pseudomonas* lipase; Overexpression; Lipase-specific foldase; Immobilization; In vitro evolution **93**, 3

Enantioselectivity; Structure-function relationships; Interfacial activation; Protein engineering; Molecular modeling; Chiral recognition **93**, 57

Endoplasmic reticulum; Lipoprotein lipase; Hepatic lipase; Combined lipase deficiency; Dimerization; Brefeldin A **93**, 149

Enthalpy–entropy compensation; Lipases; Enantioselectivity; Organic media; Two-state models **93**, 81

Esterase; Modeling; Structure; Chain length specificity; Mutant; Protein engineering **93**, 67

Expression; Lipase; Candida rugosa; Isoenzymes; Secretion **93**, 143

Fermentation; Lipase production; *Candida rugosa*; On-line monitoring and estimation control strategies; Purification **93**, 131

PII S0009-3084(98)00056-5

Genetic code; Lipase; *Candida*; Isoenzymes **93**, 47

Glycerides; Pancreatic juice; Pancreatic lipase; X-ray structure **93**, 103

Hepatic lipase; Lipoprotein lipase; Combined lipase deficiency; Dimerization; Endoplasmic reticulum; Brefeldin A **93**, 149

Immobilization—hyperactivation of lipases; Interfacial activation of lipases on solid interfaces; Immobilization—purification of lipases; Immobilized lipases in aqueous media **93**, 185

Immobilization; *Pseudomonas* lipase; Overexpression; Lipase-specific foldase; In vitro evolution; Enantioselectivity **93**, 3

Immobilization—purification of lipases; Interfacial activation of lipases on solid interfaces; Immobilization—hyperactivation of lipases; Immobilized lipases in aqueous media **93**, 185

Immobilized lipases in aqueous media; Interfacial activation of lipases on solid interfaces; Immobilization—purification of lipases; Immobilization—hyperactivation of lipases **93**, 185

Interfacial activation of lipases on solid interfaces; Immobilization—purification of lipases; Immobilization—hyperactivation of lipases; Immobilized lipases in aqueous media **93**, 185

Interfacial activation; Structure-function relationships; Protein engineering; Molecular modeling; Chiral recognition; Enantioselectivity **93**, 57

In vitro evolution; *Pseudomonas* lipase; Overexpression; Lipase-specific foldase; Immobilization; Enantioselectivity **93**, 3

Isoenzymes; Lipase; *Candida*; Genetic code **93**, 47

Isoenzymes; Lipase; Candida rugosa; Expression; Secretion **93**, 143

Lipase; Biocatalysis; Organic solvent; Supercritical fluids **93**, 157

Lipase; *Candida antarctica*; Protein engineering; Stability; Enantioselectivity **93**, 95

Lipase; *Candida*; Isoenzymes; Genetic code **93**, 47

Lipase; Candida rugosa; Isoenzymes; Expression; Secretion **93**, 143

Lipase/colipase complex; Neutron crystallographic evidence; Micelle **93**, 123

Lipase; Enantioselectivity; Stereospecificity; Crystal structure; Active site architecture; X-ray crystallography **93**, 115

Lipase production; *Candida rugosa*; On-line monitoring and estimation control strategies; Purification; Fermentation **93**, 131

Lipase; *Rhizomucor miehei*; Resolution; Chiral compounds **93**, 169

Lipases; Enantioselectivity; Enthalpy–entropy compensation; Organic media; Two-state models **93**, 81

Lipase-specific foldase; *Pseudomonas* lipase; Overexpression; Immobilization; In vitro evolution; Enantioselectivity **93**, 3

Lipoprotein lipase; Hepatic lipase; Combined lipase deficiency; Dimerization; Endoplasmic reticulum; Brefeldin A **93**, 149

Micelle; Neutron crystallographic evidence; Lipase/colipase complex **93**, 123

Modeling; Structure; Chain length specificity; Mutant; Esterase; Protein engineering **93**, 67

Molecular modeling; Structure-function relationships; Interfacial activation; Protein engineering; Chiral recognition; Enantioselectivity **93**, 57

Mutant; Modeling; Structure; Chain length specificity; Esterase; Protein engineering **93**, 67

Neutron crystallographic evidence; Micelle; Lipase/colipase complex **93**, 123

On-line monitoring and estimation control strategies; Lipase production; *Candida rugosa*; Purification; Fermentation **93**, 131

Organic media; Lipases; Enantioselectivity; Enthalpy–entropy compensation; Two-state models **93**, 81

Organic solvent; Lipase; Biocatalysis; Supercritical fluids **93**, 157

Overexpression; *Pseudomonas* lipase; Lipase-specific foldase; Immobilization; In vitro evolution; Enantioselectivity **93**, 3

Pancreatic juice; Pancreatic lipase; Glycerides; X-ray structure **93**, 103

Pancreatic lipase; Pancreatic juice; Glycerides; X-ray structure **93**, 103

Phospholipase activity; *Staphylococcus hyicus*; C-terminal **93**, 39

(phospho) lipases; Pre-pro-enzyme; Processing; *Staphylococcus* **93**, 15

(Phospho)lipase; *Staphylococcus*; Biochemical properties; Substrate selectivity; Structure-function relationship **93**, 27

Pre-pro-enzyme; (phospho) lipases; Processing; *Staphylococcus* **93**, 15

Processing; (phospho) lipases; Pre-pro-enzyme; *Staphylococcus* **93**, 15

Protein engineering; *Candida antarctica*; Lipase; Stability; Enantioselectivity **93**, 95

Protein engineering; Modeling; Structure; Chain length specificity; Mutant; Esterase **93**, 67

Protein engineering; Structure-function relationships; Interfacial activation; Molecular modeling; Chiral recognition; Enantioselectivity **93**, 57

***Pseudomonas* lipase**; Overexpression; Lipase-specific foldase; Immobilization; In vitro evolution; Enantioselectivity **93**, 3

Purification; Lipase production; *Candida rugosa*; On-line monitoring and estimation control strategies; Fermentation **93**, 131

Resolution; C-3 chirons; CALB; Substrate effect; Solvent effect; Acyl donors; Water activity **93**, 199

Resolution; *Rhizomucor miehei*; Lipase; Chiral compounds **93**, 169

Rhizomucor miehei; Lipase; Resolution; Chiral compounds **93**, 169

Secretion; Lipase; Candida rugosa; Isoenzymes; Expression **93**, 143

Solvent effect; Resolution; C-3 chirons; CALB; Substrate effect; Acyl donors; Water activity **93**, 199

Stability; *Candida antarctica*; Lipase; Protein engineering; Enantioselectivity **93**, 95

Staphylococcus hyicus; Phospholipase activity; C-terminal **93**, 39

Staphylococcus; (Phospho)lipase; Biochemical properties; Substrate selectivity; Structure-function relationship **93**, 27

Staphylococcus; (phospho) lipases; Pre-pro-enzyme; Processing **93**, 15

Stereospecificity; Lipase; Enantioselectivity; Crystal structure; Active site architecture; X-ray crystallography **93**, 115

Structure-function relationships; Interfacial activation; Protein engineering; Molecular modeling; Chiral recognition; Enantioselectivity **93**, 57

Structure-function relationship; *Staphylococcus*; (Phospho)lipase; Biochemical properties; Substrate selectivity **93**, 27

Structure; Modeling; Chain length specificity; Mutant; Esterase; Protein engineering **93**, 67

Substrate effect; Resolution; C-3 chirons; CALB; Solvent effect; Acyl donors; Water activity **93**, 199

Substrate selectivity; *Staphylococcus*; (Phospho)lipase; Biochemical properties; Structure-function relationship **93**, 27

Supercritical fluids; Lipase; Biocatalysis; Organic solvent **93**, 157

Two-state models; Lipases; Enantioselectivity; Enthalpy–entropy compensation; Organic media **93**, 81

Water activity; Resolution; C-3 chirons; CALB; Substrate effect; Solvent effect; Acyl donors **93**, 199

X-ray crystallography; Lipase; Enantioselectivity; Stereospecificity; Crystal structure; Active site architecture **93**, 115

X-ray structure; Pancreatic juice; Pancreatic lipase; Glycerides **93**, 103
